Seed Price List

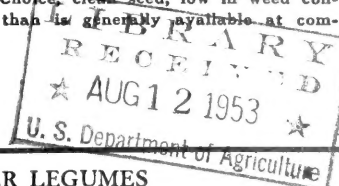

MECHANICSBURG
OHIO

August 10, 1953

"SCOTTS" grade is the highest quality seed available. It is carefully selected and noxious weed free. Most lots will test 99.75% pure seed or higher.

FARMER'S CHOICE: Choice, clean seed, low in weed content. Higher quality than is generally available at comparable prices.

SEED TREATMENT

For Treating Wheat, Oats & Barley	
14 oz. Ceresan M	\$1.25

SCOTTS FALL PASTURE

MIXTURE\$39.50 cwt.

Early fall is the ideal time to sow most pasture grasses. Scotts mixture for fall seeding is a blend of the most desirable grasses and legumes for permanent pastures. Contains Kentucky Bluegrass, Perennial Ryegrass, Orchard Grass, Timothy, Meadow Fescue, Ky 31 Fescue, Ladino and Alsike Clover.

Sow 20-25 pounds per acre for establishing a new pasture and about half that amount for reseeding an old pasture.

PASTURE GRASSES

Orchard Grass (Onion Free) \$.27 lb.
Red Top (Fancy)80 lb.
Ky. Bluegrass (Fancy)	1.35 lb.
Ky. 31 Fescue (Cert.)25 lb.
Ky. 31 or Alta20 lb.
Meadow Fescue30 lb.
Reed Canary Grass40 lb.
Ryegrass (Annual)16 lb.
Ryegrass (Perennial)22 lb.

SCOTTS HEAVY-DUTY PASTURE

MIXTURE\$48.50 cwt.

Contains Ladino Clover, Alsike, Birdsfoot Trefoil, Alfalfa, Kentucky Bluegrass, Ky. 31 Fescue, Meadow Fescue, Orchard Grass, Perennial Ryegrass and Timothy.

SCOTTS Heavy-Duty Mix is suggested where the field is to be left in pasture for at least five years and where heavy grazing is desired. Apply fertilizer, and lime where needed, and follow recommended seeding methods. Sow 25-30 lbs. per acre.

Scott's Treated Seed Grains

All Seed Wheat and Barley will be Ceresan treated without extra charge. This treatment is recommended by the U. S. Department of Agriculture and the State Experiment Stations for the control of certain smuts and many other seed borne and seedling diseases. Seed treatment usually improves stands, yields and quality of grain.

WHEAT—60 LBS. TO BUSHEL

Thorne (Field Inspected)	\$2.90 bu.
Certified Seneca	3.00 bu.
Certified Butler	3.00 bu.
Certified Vigo	3.00 bu.

Seeds For Fall -- August, 1953

Yields and quality of seed wheat this season were the best we have seen for a good many years. One of the large Scott fields went above fifty bushel per acre and several others were above the forty-five bushel mark. There seemed to be less smut and other disease than normal in this locality due to nearly everyone using treated seed and to favorable weather conditions.

With the prospect of marketing quotas and some acreage reduction we believe many growers will want the best seed wheat available to help insure top production per acre for next year. Pennoll was a little the best for us this year, but the other varieties were so good we have no complaints.

Then, too, prices are being held as close to loan values as possible to keep the cost for new cleaned and treated seed low to the customer. Certified, treated, clean, bagged seed is but a few cents more than a farmer's own wheat when the cost of hauling it to some point and paying for cleaning and treating as well as taking the risk of mixtures is considered.

Scotts seed wheat is high in test weight, well cleaned, treated, and ready for August or later delivery. Whether for shipment or pickup, place your order now and we can hold the wheat until the time you want it.

Fairly good supplies of Fall Barley and Seed Rye are available. However, with lower wheat acreages demand for these may be greater this year. The several varieties of Barley on hand are exceptionally bright in color and of good quality and germination. Seed Rye also has been harvested under ideal conditions. Both are ready for immediate shipment. All of Scotts quotations on seed grains are under those of last season.

LEGUMES AND GRASSES

Most of the widely used farm seed grasses are lower in price than last year, including Brome Grass, the Fescues, and Orchard Grass. At present, Timothy and Rye Grasses are about the same with Blue Grass higher due to about a fifty per cent crop.

Legumes, too, as Alfalfas, Clovers, Ladino, Sweet Clover and others are lower than last season and are expected to remain at rather low levels during the winter and spring. Anticipated large production plus government supplies accumulated under the loan program makes prices favorable to the buyer but very discouraging to the producer of these seeds.

When the price is so little more for good seed and seed costs are such a small part of the expense of producing a crop we urge you to use the best. Try Scotts.

Sincerely,

SCOTT FARM SEED CO.

GRAIN VARIETY DESCRIPTION

WHEAT - BARLEY - RYE - OATS

THORNE—Developed in Ohio and has been the most widely used variety in a number of states. Red chaffed, beardless, very stiff strawed, high yielding and has excellent milling quality. Has outyielded all of the older varieties and is adapted to a wide area.

SENECA—A newer variety closely related to Thorne. Similar in appearance as it is red chaffed, beardless, stiff strawed and of equal milling quality. Has shown a slight yield advantage over Thorne and averages higher in test weight.

PENNOLL—A new Pennsylvania variety, light chaffed, beardless, stiff strawed, high test weight and excellent yield. Has good resistance to stinking smut, good milling qualities and test weights and yields have equalled or surpassed other varieties.

VIGO—An Indiana variety, winter hardy, high yielding, and excellent test weight. A smooth white chaffed wheat, taller and not quite as stiff as Thorne and Seneca. Has performed best in Western Ohio and Indiana, with yields not as good East from these points. Outstanding characteristics have been winter hardiness and high test weight.

TRUMBULL—One of the older varieties that has continued to be grown because of its high milling qualities, consistently high test weight and good yields. White chaffed, beardless, high quality kernels.

BUTLER — A bearded, white chaffed wheat, excellent stiffness and is winter hardy. Especially suited if wheat sowing is late. Has outyielded Thorne and is higher in test weight. Most popular in Southern and Western Ohio but also has had good production record in other sections.

OHIO NO. 1 BARLEY—Similar to Kentucky No. 1 barley but has excelled in yield under Ohio conditions. Bearded, average straw stiffness, should be sown ten days ahead of wheat to get well started before winter. Not as hardy as wheat or rye so produces better where winters are less severe or when winters are mild.

KENBAR BARLEY—A new variety released by Kentucky and Pennsylvania. Has outyielded Kentucky and Ohio barleys. Is much stiffer and finer strawed, medium early maturing but is not considered quite as winter hardy. Probably the best in the winter barley growing area.

KENTUCKY BARLEY—Similar to Ohio No. 1 barley and is the most widely used variety at the present time. Fairly winter hardy and is a good producer.

BALBO RYE—Is considered superior to common or Rosen type rye for pasture as it is more leafy and generally higher yielding for fall or spring pasture. Superior production seems to lessen in Northern sections.

ROSEN OR COMMON RYE—Satisfactory for grain production for feed or for plow under. Rye is sown from the last cultivation of corn up to several weeks after wheat seedings, is winter hardy and considered one of the best winter cover crops.

WINTER TURF OATS—There are a number of certified and satisfactory winter oats varieties for states that have mild winters or can make early spring seedings. Winter or fall oats is less winter hardy than barley, wheat or rye and is not recommended for Ohio, only to a limited extent in Pennsylvania and on north. The Winter Turf variety is considered more winter hardy and has a better chance of production in most of the borderline areas.

Scott Farm Seed Company, Mechanicsburg, Ohio

THE SCOTT FARM SEED COMPANY warrants to the extent of the purchase price that seeds sold are as described on the container within recognized tolerances. Seller gives no other or further warranty, expressed or implied.
